

Software Dev Ops (Junior / Medior) – f/m/d (1 opening)

At intoPIX, we believe that we can shape the world with more efficient, robust, and valuable technologies. Our team is empowering the products of all the leaders of the audio-visual industry (like Nikon, Sony, Panasonic, and many more) by providing very high-quality software and hardware implementations of our innovative solutions. Our key achievements are in the domain of image processing and video compression.

- intoPIX JPEG2000 technology has been the cornerstone of cinema digitalization. 50% of cinema projectors around the world are decoding images in real time with our solutions.
- intoPIX has received an Emmy Award for its impact on the TV industry. Events like the Olympic Games or the FIFA World Cup are produced in HD using our technology.
- intoPIX has developed and introduced its Tico technology as the de-facto solution to achieve 4K and 8K live production. We have driven its standardization by the ISO and it is now internationally known as JPEG XS.
- intoPIX has partnered with Nikon to redefine the way photographers take pictures today with a new RAW standard – TicoRAW - saving much storage and allowing to make the most efficient DSLR camera in the world.

ARE YOU READY TO STRENGTHEN OUR TEAM?

The IntoPIX software team is seeking a motivated DevOps Engineer to enhance and maintain our CI/CD infrastructure. In this role, you will play a crucial part in ensuring our software development processes are efficient, reliable, and capable of delivering high-quality, validated packages rapidly. By maintaining and improving our build systems, test systems, and automated validation pipelines, you will empower the software team to innovate with confidence.

We are looking for engineers who are eager to learn, collaborate, and help us reach our ambitious goals as a team. If you are passionate about automation, continuous integration, and delivering robust software systems, we want to hear from you. At IntoPIX, we value engineers who are proactive, performance-oriented, and ready to contribute to our dynamic and friendly environment.

YOUR MAIN RESPONSIBILITIES WILL INCLUDE

- Maintaining and improving our build systems, test systems, and CI/CD pipelines to ensure software packages are reliably validated and promptly delivered
- Adding new machines and platforms to our validation infrastructure as our technology and customer base evolve
- Ensuring the software team can trust the build and validation process at every stage of development
- Collaborating with developers to integrate automated tests and validation tools

SKILLS YOU HAVE AND WANT TO IMPROVE

- Maintaining and improving our build systems, test systems, and CI/CD pipelines to ensure software packages are reliably validated and promptly delivered
- Adding new machines and platforms to our validation infrastructure as our technology and customer base evolve
- Ensuring the software team can trust the build and validation process at every stage of development
- Collaborating with developers to integrate automated tests and validation tools

WHAT WE OFFER

You will join a growing, innovative high-tech company, working alongside passionate and skilled colleagues. Our headquarters are in Mont Saint-Guibert, Belgium, near Louvain-la-Neuve. We offer a competitive salary and attractive benefits, as well as the flexibility of partial remote work. With full team integration from your first day, you will take on meaningful tasks, responsibility, and continuous learning opportunities as you help drive our success.

If you meet the profile and would like to be part of the team, please send your CV and cover letter to jobs@intopix.com
